

# Final Project Report Calendar Web Application

*Due: 20.01.2021*

Student name: Medina Zaganjori  
Student number: 150160908

## 1. Project Description

This project aims to create a virtual planner for all students starting from their studies, event activities or interviews. The web application called StudentPad provides notifications for the interview section by using flask libraries. This website offers comfortability with all types of users. Users can easily sign up or login to the website with only username and password required. Users can register events like: Deadlines, Exam Dates, Interview Dates, Contacts too. The project uses Python language, Flask web application framework, and PostgreSQL as a database. ElephantSQL is used as a browser tool for SQL queries. Database is accessed via dbapi2 compatible driver.

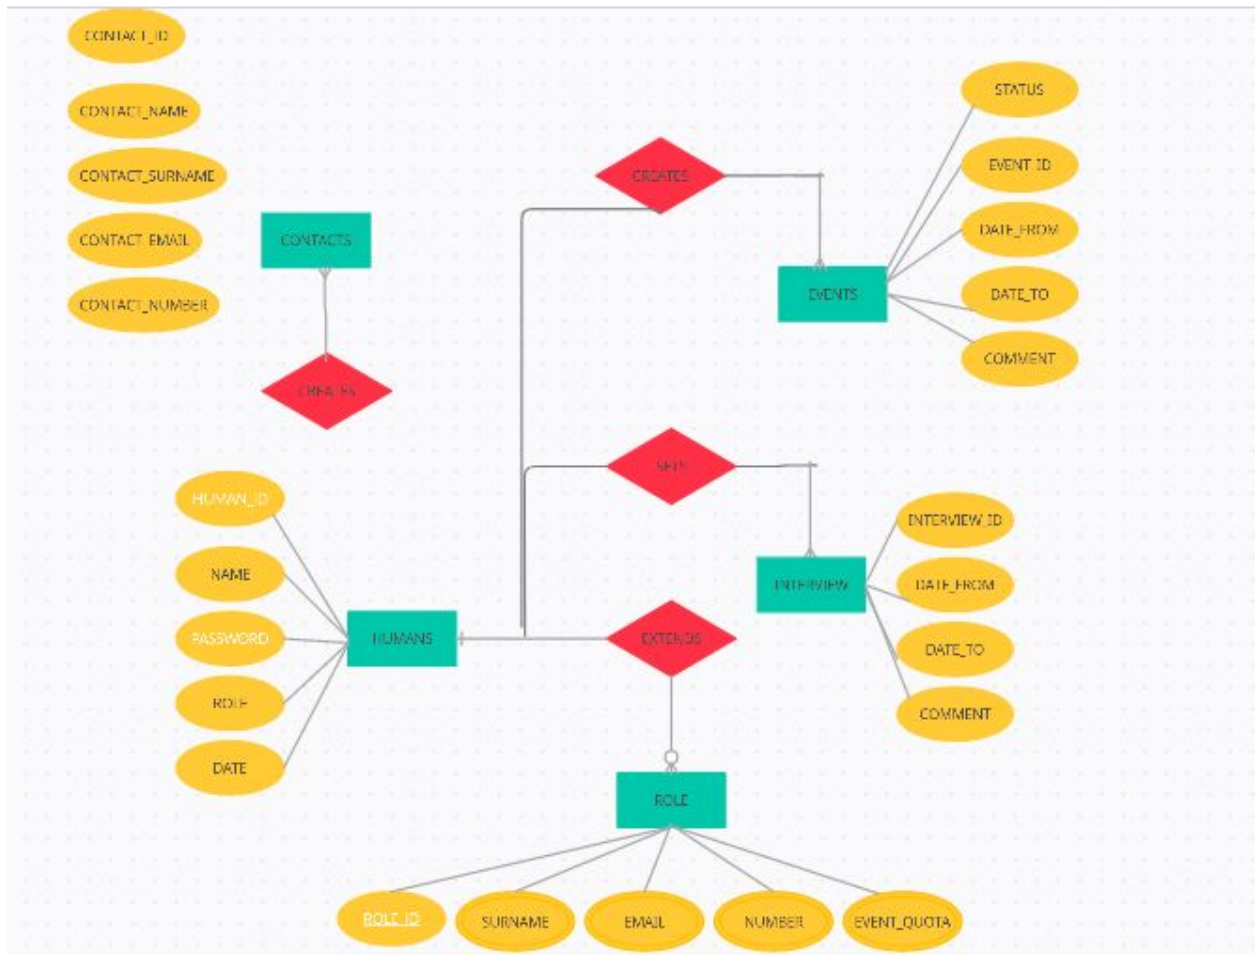

Figure1: Database and Website Framework.

## 2. Data requirements and E/R Design

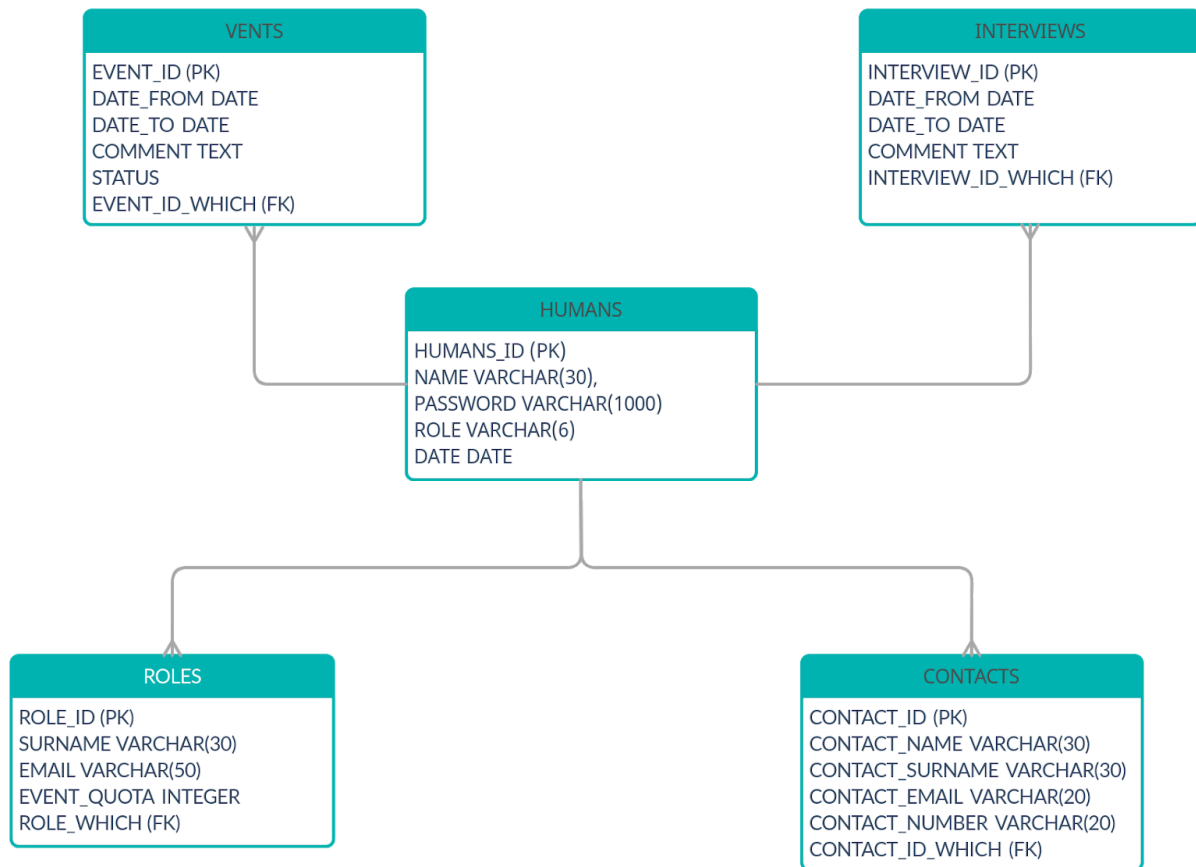

Detailed data requirements of the application:

- An user can create one or more events.
- An user can save more than one interview.
- An user can create a contact list.
- An user can extend his personal information by creating his system role.

Due to the limitation of component usage in the free Creately website for E/R diagram HUMANS component is supposed to be connected to CREATES relation and also the attributes are colored in yellow.

### 3. Logical Design/Normalization

## 4. User Interface

Figure2: Frontal view of the website and menu options.

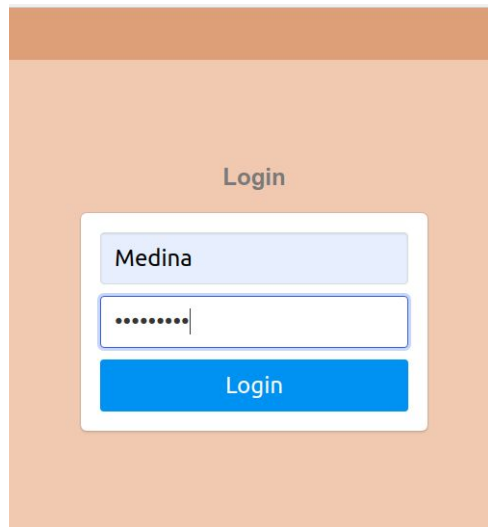

Figure3: Login Page.

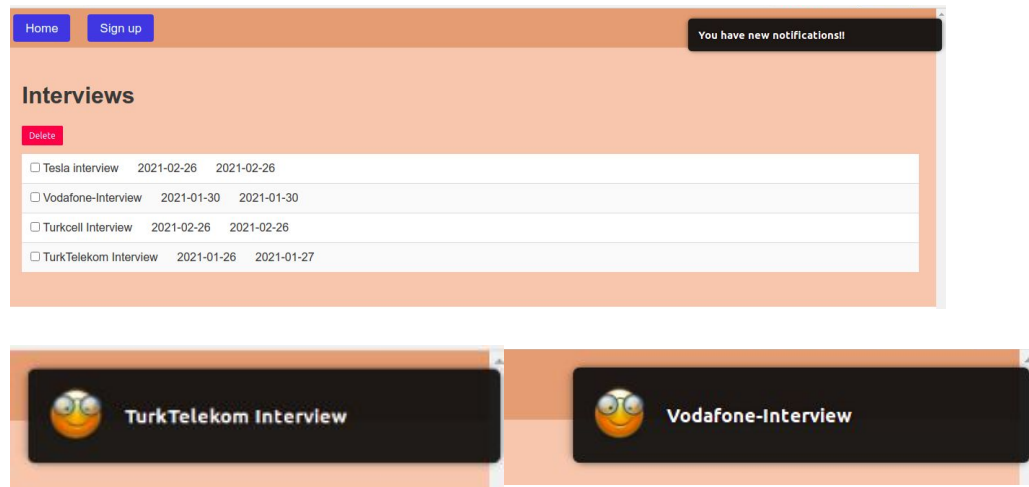

Figure4: Redirection to Interview page and Notification system of current month's interview.

The website doesn't show an advanced front-end framework. Bulma is used as an open source CSS framework based on Flexbox and built with Sass. Passlib.hash library is used as a crypt method to hash passwords which supports a variable-length salt and a variable number of rounds. Subprocess library is used in order to handle notification systems.

## 5. Database Creation and Connection.

Since PgAdmin II had lack of functionality in my Ubuntu 16.04 and PHP Admin couldn't be installed due to the software packages missing in my platform I used ElephantSQL as a browser tool for raw SQL queries and supportive of PostgreSQL too. As an online database hosting service ElephantSQL is an user friendly system where we can create, read, delete or update queries. The only thing required is a valid email and a password. One requirement that was part of Project handout was connecting postgres. Psycog2 as a PostgreSQL adapter for Python language should be installed via pip commands:

```
(base) medina@medina-Latitude-E7250:~$ pip install psycpg2|
```

Figure5: Installing psycpg2 library.

ElephantSQL provides in your account a database URL where your queries and operations are saved.

URL postgres://dkzczqkr:A9DqgG...@dumbo.db.elephantsql.com:5432/dkzczqkr

Figure6: Database URL.

```
import psycopg2 as dbapi2
from datetime import datetime

url = "postgres://dkzczqkr:A9DqgGng3sZrPhRCTldrz1LVx9ADuvBr@dumbo.db.elephantsql.com:5432/dkzczqkr"
```

Figure7: Connecting Database to Python.

The online service provides you a SQL browser where you can type query statements and execute them.

SQL Query

Table queries ▾ Previous queries ▾ Execute ▶

- contacts (public) (0 KiB, ~0 rows)
- events (public) (0 KiB, ~0 rows)
- humans (public) (0 KiB, ~0 rows)
- interviews (public) (0 KiB, ~0 rows)
- roles (public) (0 KiB, ~0 rows)

NU MORE

Figure8: SQL browser.

SELECT \* FROM "public"."humans" LIMIT 100

Table queries ▾

Previous queries ▾

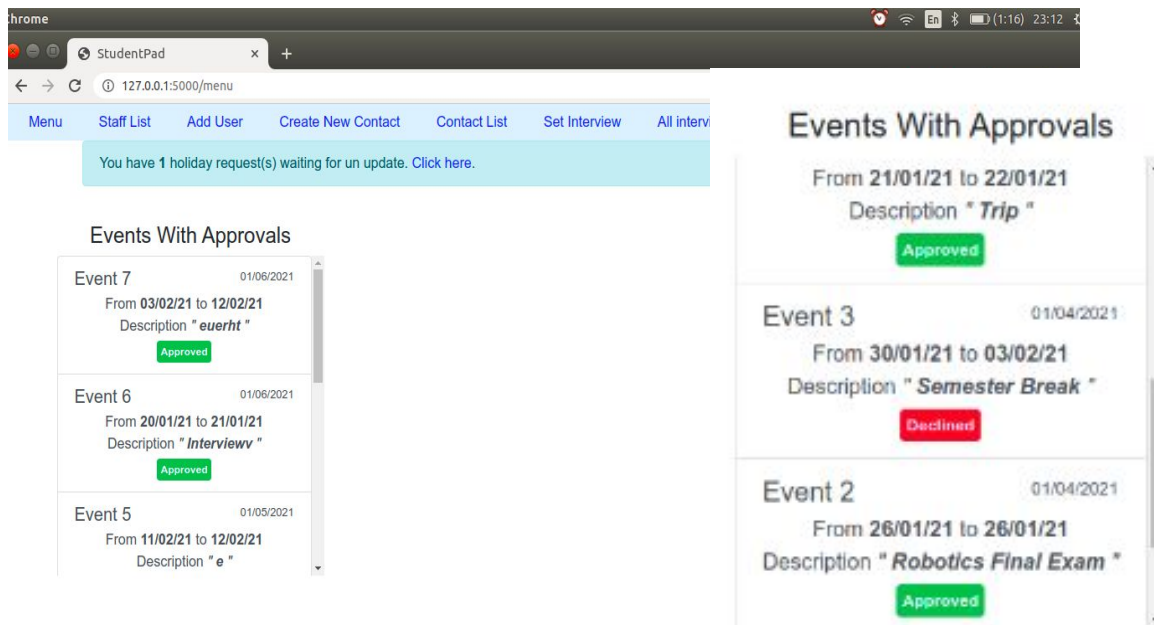

Execute ▶

human_id	name	password	role	date
5	Medina	\$pbkdf2-sha256\$29000\$C0FozXkvRWiN8X7vFW9tbQ\$r.yZL0//Vui4yxvuyvMIE4hwfM9L4ncpWad1eZvJ/uw	user	2021-01-17

Figure9: User Queries.

## 6. Outside the scope

SQLAlchemy is an open source SQL object-relational mapper for Python. It's a very efficient tool and high-performing for database access. The website has been coded earlier using SQL-Alchemy but due to the **unacceptance** from the project requirement the website had to be re-coded again from scratch using raw SQL query statements. The front-end part looks more advanced and has more functionalities due to the long time that was planned for the website starting from the middle of semester. Below I will be attaching some screenshots :
